

Solutions for today.
Benefits for generations.

BioHub Carbon

Where science meets sustainability, and your farm's potential meets our passion.

BioHub Carbon

BioHub Carbon is a liquid biostimulant containing humic and fulvic acids derived from American Leonardite. It contains no insolubles or sediments which avoids blockages in application equipment. The new updated product for 2024 has the added benefits of an organic compound that acts as a buffer to improve nitrogen use efficiency.

Leonardite is a rich source of humic acids. This is due to the time taken for the humification process. Leonardite can be a result of processes that have taken place over 70 million years. The American Leonardite utilised in BioHub Carbon is one of the oldest known sources of Leonardite and has been the benchmark for quality humic sources for decades.

Benefits

When utilised as part of our integrated biological solution, called the BioPlan, BioHub Carbon can provide the following benefits to the soil and crops.

Being sourced from American Leonardite, the activity is **5 times** stronger than other humic matter

Improved root structure development and uptake of water/nutrients.

Excellent food source for biology and assists with nitrogen buffering in soil.

Improves physical characteristics of the soil especially soil glomalin.

At BioHub Solutions, we fuse cutting-edge science and data with the wisdom of nature to deliver pioneering biological solutions to the agricultural sector. Our Australian heritage drives us to innovate for the unique challenges faced by local and global farmers, ensuring our products not only boost your bottom line but also safeguard the environment.

Take the guesswork out of biologicals by contacting one of our team or authorised business partners.
