

Solutions for today.
Benefits for generations.

BioHub Emerge

Where science meets sustainability, and your farm's potential meets our passion.

BioHub Emerge

BioHub Emerge is proprietary blend of nutrients, organic compounds and biostimulants. It is designed to aid in germination performance by improving root biomass and providing biostimulants for biology growth. BioHub Emerge is best utilised with BioHub Energise-P and targeted BioHub biological solutions. It contains

- Macro-nutrients such as nitrogen, phosphorus, and potassium.
- Micro-nutrients such as chelated zinc
- Plant growth regulators high in auxins to improve root growth
- Other compounds such as amino acids, polysaccharides, antioxidants, and other bioactive compounds: These components contribute to overall plant performance during germination and early growth.

Benefits

When utilised as part of our integrated biological solution, called the BioPlan, BioHub Emerge can provide the following benefits to the soil and crops.

Improves plant performance during germination and transplant.

Improves key growth parameters such as cell division and root development.

Potentially improves plant recovery from stress events in early stages due to improved root biomass.

Replaces the need for other biostimulants. So saving money and making a solution simple.

At BioHub Solutions, we fuse cutting-edge science and data with the wisdom of nature to deliver pioneering biological solutions to the agricultural sector. Our Australian heritage drives us to innovate for the unique challenges faced by local and global farmers, ensuring our products not only boost your bottom line but also safeguard the environment.

Take the guesswork out of biologicals by contacting one of our team or authorised business partners.
