

Solutions for today.
Benefits for generations.

BioHub Worm+

Where science meets sustainability, and your farm's potential meets our passion.

BioHub Worm+

BioHub Worm+ contains the living component of worm castings and composts. The beneficial micro-organisms (bacteria, fungi, protozoa, and nematodes) are extracted into a liquid solution after the bulk of the original compost has been removed. During the production process air and water are circulated and an extractor dislodges the beneficial organisms into a liquid solution. BioHub Worm+, which still contains the humates, growth hormones, minerals and other components of worm castings and composts are the bottled.

Depending on the challenge and application rates, BioHub Worm+ can be utilised as a biostimulant, soil ameliorant, or low nutrient product.

Benefits

When utilised as part of our integrated biological solution, called the BioPlan, BioHub Worm+ can provide the following benefits to the soil and crops.

Contains higher numbers of nutrients and biology compared to industry norms.

Improved root structure development and uptake of water/nutrients.

Excellent food source for increasing biology levels in the soil.

Improves physical characteristics of the soil over longer periods.

At BioHub Solutions, we fuse cutting-edge science and data with the wisdom of nature to deliver pioneering biological solutions to the agricultural sector. Our Australian heritage drives us to innovate for the unique challenges faced by local and global farmers, ensuring our products not only boost your bottom line but also safeguard the environment.

Take the guesswork out of biologicals by contacting one of our team or authorised business partners.
